Inputs for forward

Below is the MicroWorlds Vocabulary entry for forward.

What does the (fd) mean?

Is forward a command or a reporter?

In the examples, the inputs to forward are constants. For the first example, what is the input to forward?

Write the first example below. Draw a circle around each primitive. Are the primitives commands or reporters?

Write down two more examples for `forward` using constants.

To be an input that `forward` likes, what does the reporter have to report?

Create five more examples for `forward` that use different reporters as input. You can use the MicroWorlds Vocabulary to find the reporters you need. If the reporters need inputs of their own, be sure to provide inputs for those reporters.

Create two examples for forward that use variables. Use make to create the variables and give them a value before you write the example.
