

Testing Understanding #3

Name _____

Date _____

Inputs for and

Below is the MicroWorlds Vocabulary entry for and.

Is and a command or a reporter?

In the examples, the inputs to and are reporters. For the first example, what reporter does and get as its *true-or-false2* input? Write down the reporter together with its inputs.

To be an input that and likes, what does the reporter have to report?

Create five more examples for `and` that use different reporters as input. You can use the MicroWorlds Vocabulary to find the reporters you need. If the reporters need inputs of their own, be sure to provide inputs for those reporters.

Create two examples for `and` that use variables. Use `make` to create the variables and give them a value before you write the example.

Create as many examples as you can for and using constants. For each example, write down what and would report.
